FAQ (Frequently Asked Questions)

1. Is there a need to account for remaining quantity of each product when the user is trying to purchase?
   - Yes, upon successful purchase, you will need to reduce the quantity of the product.

2. Are we allowed to store in the updated changes in the database only after the user clicks purchases?
   - Yes, in order to meet the basic requirements, any ways of doing it will be allowed as long as the backend data are updated.

3. Are there any specific language/frameworks that must be used for backend?
   - Feel free to use any backend frameworks. The main goal is to get your app up and running.

4. What are the requirements for the authentication API?
   - You can just work on a basic authentication, for instance having the backend check if the username and password matches a row in the database or, any other kind of authentication will be deemed as an advanced feature.

5. Are we able to modify the data in the given datasets?
   - Yes, you may modify them to suit your needs.

6. For every Frontend task, there will be a matching Backend task as indicated by the numbering.
   - The purpose of the numberings are ONLY used for mapping the frontend and backend task.

7. Are we allowed to use any kind of database?
   - Yes.

8. Does the scope include the payment of the order after a user checkout?
   - No. But you may add it as an advanced feature.
